March 2, 2009

Canacol Energy Ltd. Releases F2009 Q2 Results

Canacol Energy Ltd. (formerly BrazAlta Resources Corp.) ("Canacol" or the "Corporation"; TSX: CNE.V) announces that it has filed its interim quarterly financial statements for the three and six months ended December 31, 2008 ("Financial Statements") and its Management Discussion and Analysis ("MD&A"). Copies of the filed documents may be obtained via SEDAR at www.sedar.com.

Canacol is a Canadian based international oil and gas corporation with core operations in Colombia, Brazil, and Guyana. Canacol is publicly traded on TSX Venture Exchange (TSXV: CNE). The Corporation's public filings may be found at www.sedar.com.

This press release may contain statements within the meaning of safe harbour provisions as defined under Securities Laws and Regulations. The above statements are based on the current expectations and beliefs of Canacol's management and are subject to a number of risks and uncertainties that may cause the actual results to differ materially from those described above. Canacol does not undertake any responsibility with regard to the accuracy of this press release nor the obligation to update the abovementioned information.

This press release contains certain forward-looking statements within the meaning of applicable securities law. Forward-looking statements are frequently characterized by words such as "plan", "expect", "project", "intend", "believe", "anticipate", "estimate" and other similar words, or statements that certain events or conditions "may" or "will" occur. Forward-looking statements are based on the opinions and estimates of management at the date the statements are made and are subject to a variety of risks and uncertainties and other factors that could cause actual events or results to differ materially from those projected in the forward-looking statements. The Corporation cannot assure that actual results will be consistent with these forward looking statements. They are made as of the date hereof and are subject to change and the Corporation assumes no obligation to revise or update them to reflect new circumstances, except as required by law. Prospective investors should not place undue reliance on forward looking statements. These factors include the inherent risks involved in the exploration for and development of crude oil and natural gas properties, the uncertainties involved in interpreting drilling results and other geological and geophysical data, fluctuating energy prices, the possibility of cost overruns or unanticipated costs or delays and other uncertainties associated with the oil and gas industry. Other risk factors could include risks associated with negotiating with foreign governments as well as country risk associated with conducting international activities, and other factors, many of which are beyond the control of the Corporation. A barrel of oil equivalent (boe) is derived by converting gas to oil in the ratio of six thousand cubic feet of gas to oil and may be misleading, particularly if used in isolation. A boe conversion is based on an energy equivalency conversion method primarily applicable at the burner tip and does not represent a value equivalency at the wellhead, especially in various international jurisdictions.
